

KATEKANI NYAMANDI

Software Developer

knyamandi99@gmail.com • github.com/katekanin • Johannesburg, South Africa

PROFESSIONAL SUMMARY

Software developer with around two years of experience building modern, responsive web and mobile experiences with JavaScript and React. I like owning a feature from idea to shipped, integrating APIs, and making interfaces that feel fast and clean. Comfortable taking initiative and figuring things out without hand-holding, whether that is rebuilding a platform end-to-end on a tight deadline or tracking down a performance problem on my own. Most of what I am proud of is built and shipped, not just described, so the projects below and on my GitHub are the real story.

CORE SKILLS

Languages & Frameworks: JavaScript (ES6+), React, React Native, Node.js, HTML5, CSS3 / Sass

Frontend Craft: Responsive Design, Reusable Component Libraries, State Management (Zustand), Interactive UIs, Performance Optimisation

Integration & Data: REST API Integration, Third-Party APIs (Google Maps, PlantNet), Firebase, JSON, SQL / PostgreSQL

Workflow: Git / GitHub, Agile, Independent Ownership, Cross-Functional Collaboration

SELECTED PROJECTS

Safe Spaces – Interactive Safety-Mapping App | *React, Google Maps API, Node.js, PostgreSQL* • [Live demo](#)

- Built an interactive, map-based web app in 48 hours, integrating the Google Maps API for live location, markers, and routing (FNB App of the Year hackathon).
- Created a reusable geolocation component so teammates could add complex mapping with zero configuration, and made the design and architecture calls independently under deadline pressure.

Plantly – Plant Recognition App | *React Native, PlantNet API, Zustand, Expo* • [Live site](#)

- Built a cross-platform mobile app with a camera-driven recognition flow, integrating a third-party AI API and handling authentication, error states, and persistent local storage for a smooth user experience.

BookNiche – Content Discovery Platform | *React.js, Sass, Zustand, Firebase* • [GitHub](#)

- Built a responsive content-discovery interface with custom Sass styling, then traced and fixed a performance bottleneck on my own initiative, cutting page load times by 15%.

PROFESSIONAL EXPERIENCE

Junior Systems Integration & AI Automation Engineer | **DYDX Digital** | *October 2025 – Present*

- Build and maintain web service integrations in JavaScript / Node and Python, working hands-on with REST APIs, webhooks, and JSON across platforms.
- Own features end-to-end from idea to production deployment, taking the initiative to find and fix issues without waiting for direction.

Junior Frontend Developer | **Ogilvy South Africa** | *March 2024 – October 2025*

- Built responsive, client-facing web interfaces with React, JavaScript, HTML, and CSS across multiple brand projects at one of the world's largest agencies.
- Developed reusable UI component libraries integrated with REST APIs and CMS-driven data, enabling dynamic content and faster delivery.

- Led a 10-page platform rebuild end-to-end in 6 weeks, owning the frontend and delivery without a dedicated project manager.
- Debugged and resolved live UI and integration issues under tight client deadlines, improving stability and user experience.

EDUCATION & CERTIFICATIONS

National Certificate: Systems Development | Umuzi.org | *March 2024 – March 2025*

Web Development (HTML, CSS, JavaScript), Responsive UI, Database Design, Test-Driven Development, Agile

BSc Mathematics and Computer Science | University of South Africa | *Expected December 2027*

freeCodeCamp: JavaScript Algorithms and Data Structures | *Verify credential*
